

	VA Gardens LLC – Services for Year 2026
Landscape Design (with blueprints)	Landscape design is the art of arranging the features of an area of land for aesthetic and/or practical reasons. It is often divided into two major components: hardscape (the nonliving elements, such as patios, walkways, retaining walls, and fences) and softscape (the living elements, such as trees, shrubs, bushes, grasses, and flowers). A foodscape is a subset of a softscape and can include hardscape elements. The foodscape arranges the features of an area to provide a higher-quality food product.
Material and Product Sourcing	This is the identification of items (including tools) needed within the landscape and their suppliers. This encompasses all landscape supplies and all types of plants.
Pick up and Delivery	This service assists the DIY'er by providing an easy and cost-effective way to get materials and products to the site, reducing personal labor and transportation concerns.
